

Profilo T 500

CD1712B2

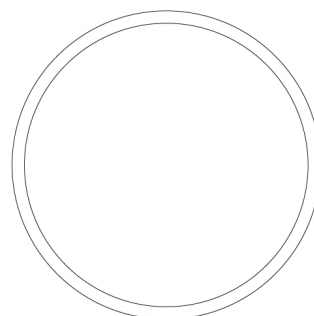

Profilo is a family of ceiling lamps available in different sizes and shapes: square 300, 500 and 800 mm and round 500 and 800 mm. Its distinctive feature is the diffuser with anti-glare technology, designed to ensure visual comfort and uniform, controlled light. The calendered and welded aluminium profile edge is deliberately left visible: a graphic feature that enhances the finishes and wide range of colours, allowing the product to blend in with any architectural context. Available in different versions and dimming systems, Profilo precisely meets the needs of residential and professional environments. A clean, timeless aesthetic in which light becomes an integral part of the space.

Characteristics
