

pic-a-stic
ANDREAS WALTHER 2022

Pic-a-stic is a pendant lamp from the playful and humorous collection by Ingo Maurer. The lamp consists of a set of 50 lacquered wooden rods and silicone rings that hold the rods "in the air". Andreas Walther, who originally comes from the field of stop-motion film, wanted his design to capture the moment when the sticks of the classic game "Mikado" are released before they fall apart. Pic-a-stic is available in two versions: a version with black and white and two red sticks and a colorful version with blue, red and orange sticks. In this way, pic-a-stic leaves room for free design and the owner becomes a co-designer, as with numerous models from Ingo Maurer. The luminaire can be assembled in 14 variants, which can be varied and extended with individual color combinations. As a single luminaire above a table or as a group, for example above a bar counter, pic-a-stic can be used in both private and public areas.

Light source

GU10 socket, max. 12 W LED. Supplied without light source. Suitable for light sources of energy efficiency classes EEC A–G, which can be replaced by the user.

Technical data

For 100-240 volts.

More info

Wooden rods, glass light body, silicone strips.

Colours

pic-a-stic comes in two sets of stick colours: black-white-red and blue-orange-red.
